

Easy-to-use GIS tools and reports built specifically for school district planning

ONPASS[®] Pro

ONLINE PUPIL ASSIGNMENT SYSTEM

Now running on the latest ArcGIS Pro platform

Planware's flagship GIS software, ONPASS Pro, is the next generation of the widely distributed and successful ONPASS boundary planning software. It is an easy-to-use tool for school district planners to gather, store, analyze, and present demographic and geospatial data.

Originally developed in the 1970s, Planware has rebuilt ONPASS from the ground up, now running on Esri's¹ newest GIS platform, ArcGIS Pro. The standard for GIS around the world, ArcGIS Pro encompasses the most recent advances in technology including integration with ArcGIS online and web capabilities, 64-bit processing, geospatial analysis, and database support.

The new ONPASS Pro offers all the benefits of the ArcGIS Pro platform on which it is built and adds:

- Custom-built planner's tools, geodatabase, and reports
- Faster and more intuitive data structures and tables
- Data export functions to other applications (Excel, PDF, SHAPE, etc.)
- Inline, context-sensitive help information

ONPASS Pro provides a customized interface that requires no technical expertise to create planning scenarios for your district.

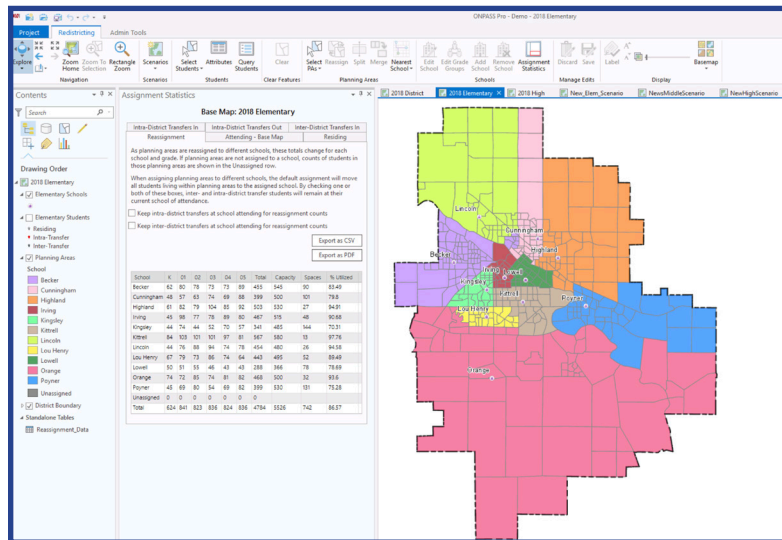

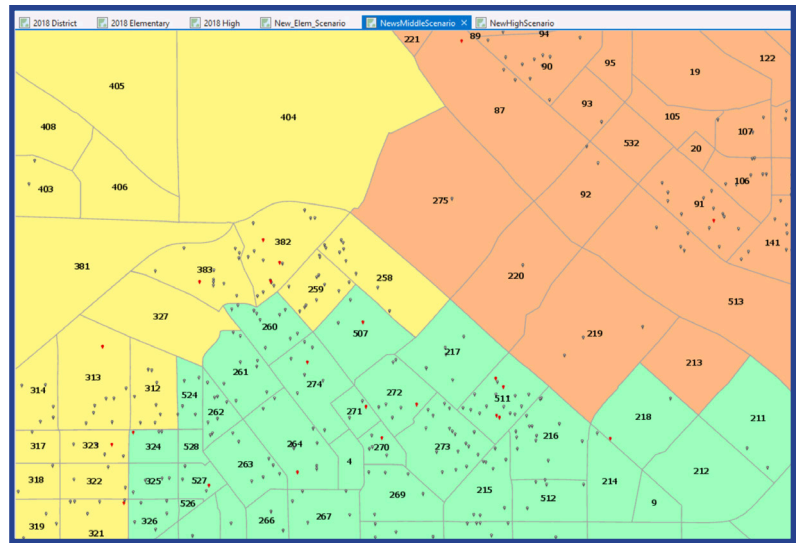

“We have examined several scenarios using ONPASS Pro to help alleviate overcrowded and underutilized schools. Our entire community has endorsed the software and expressed satisfaction with the results.”

Scott B. Thompson
Superintendent of Schools
Community Consolidated
School District 15

Use ONPASS Pro to create multiple planning scenarios for your district and make data-informed decisions about planning objectives:

- Review and optimize school capacities to meet district goals
- Change boundaries of one or more schools by assigning planning areas from one school to another
- Review your district's inter- and intra-district student transfer policies
- Reconfigure grade level groups at one or more schools
- Balance enrollments, programs, and demographic diversity across schools
- Geocode student addresses and check the accuracy of your student information system
- Add assessor's parcel and census bureau geographic data for more powerful analysis
- Gather and store district demographic data in a geodatabase giving planners a DIY one-stop shop for data
- Create maps for presentations, district master plans, and informational brochures

“ONPASS Pro provides us the flexibility to quickly build scenarios with data-driven backing—best of all—it's easy!”

*Eric Wells
Chief Information Officer
Muskogee Public Schools*

How can ONPASS Pro benefit your school district? When you use ONPASS Pro, you can quickly and easily collect and analyze your school district data and create scenarios that fulfill your unique goals.
