**Do You Need ONPASS Pro?**

ONPASS Pro is a geographic information system tool for strategic planning and day-to-day problem solving.

**What is a GIS?**

A geographic information system (GIS) is a computer application that ties multiple layers of data to a position on a map, giving insights into geographic data relationships and patterns.

**ONPASS Pro** maps geocoded student addresses to make better use of your SIS data.

---

**Start Your Needs Assessment**

Are you redistricting?

- Yes: Do you need to provide the consultant with data?
  - Yes: GIS helps you to map school attendance zones based on geocoded student data.
  - No: GIS visually communicates your data and makes it easy for consultants and stakeholders to understand.

- No: Are you planning to hire a consultant?
  - Yes: GIS helps you visualize enrollment patterns and demonstrate the need to open or close a school.
  - No: Do you need to track changes in student enrollment or geographic distribution?
    - Yes: GIS identifies students based on location and grade.
    - No: GIS helps reassign students due to capacity constraints, renovations, or changes in special programs.

- No: Do you need to reconfigure grade levels in buildings?
  - Yes: GIS visually communicates your data and makes it easy for consultants and stakeholders to understand.
  - No: Do you have a data-driven plan to target the right students for interventions?
    - Yes: GIS maps student demographic data (special education, gifted and talented, income level, etc.) to school sites and programs where they’re needed most.
    - No: GIS helps identify students, families, teachers, and school sites affected, to target support in the event of a disaster.

- No: Do you need to move students out of a particular building?
  - Yes: GIS helps you to map school attendance zones based on geocoded student data.
  - No: GIS lets you share maps of students and potential or existing hazards with those who need to know.

Do you need to create, update or improve your disaster response plan?

- Yes: GIS shows students’ geographic proximity to hazards so you can plan effectively.
  - Yes: GIS helps identify students, families, teachers, and school sites affected, to target support in the event of a disaster.
  - No: GIS lets you share maps of students and potential or existing hazards with those who need to know.

- No: Can you currently share location data with emergency first responders?
  - Yes: GIS shows students’ geographic proximity to hazards so you can plan effectively.
  - No: GIS lets you share maps of students and potential or existing hazards with those who need to know.
